

Sustainability firmly embedded in everyday life

Müller Processing's sustainability strategy focuses on climate neutrality, resource-efficient products, and employee health and motivation. Through this report, Müller Processing demonstrates how sustainability is practiced and implemented within the company.

Sustainability certificates

Müller Processing continues successfully in line with ISO 9001, ISO 14001, and ISO 45001 standards.

Climate-neutral Müller Group

Müller Processing is part of the Müller Group and thus benefits from ongoing infrastructure improvements and well-thought-out sustainability measures.

Resource-saving products

The entire customer process is focused on sustainable solutions. Through in-depth consultation, we design customized systems to maximize output and reduce electricity and water consumption.

The key components are manufactured near the assembly sites to minimize transportation distances.

The systems are easy to maintain and built to last. Maintenance and retrofit options extend their service life. We serve customers worldwide. By collaborating with local partners, we ensure quick response times, lower travel costs, and reduced CO₂ emissions.

Customers value the high quality and future-proof solutions that take holistic sustainability considerations into account.

Self-motivated employ

Colleagues from the Müller Group's Central Services were invited to the annual summer barbecue, where they strengthened their bonds and celebrated together.

The statistics on workplace accidents remain at a low level, below the industry average.

Here's an example that shows just how strong the team spirit is among the employees: Every year during the Advent season, they get together for an Advent photo shoot.
