

Smart measures support the environmental protection and healthy, motivated employees.

This year's sustainability report once again demonstrates that Müller DrumTec has taken action on key areas to better serve the environment and its employees, as well as to strengthen resource-efficient production.

Sustainability certificates

Müller DrumTec has a proven track record of successfully implementing management systems (ISO 9001, ISO 14001, ISO 45001).

Climate-neutral Müller Group

Müller DrumTec's contribution to a climate-neutral Müller Group:

As part of the roof renovation, the thermal insulation was significantly improved and the use of natural light was optimized. In the long term, this reduces energy consumption for heating and lighting, thereby lowering CO2 emissions. At the same time, employees benefit from better lighting conditions and a more comfortable indoor environment.

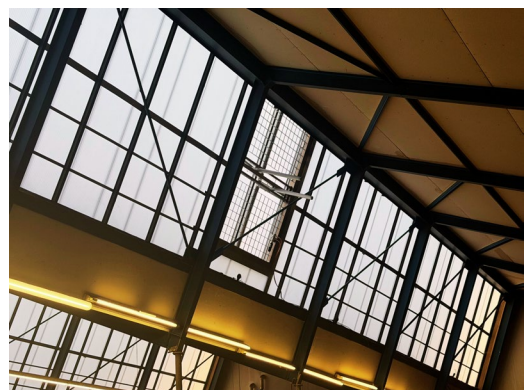

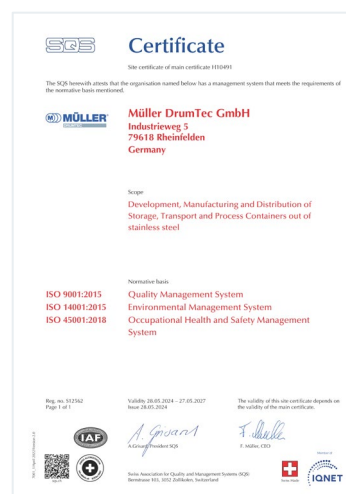

Photovoltaic 2025	Installed PV power	Electricity produced
	257 kWp	241 MWh

Resource-saving products

By merging two departments and reorganizing the final assembly process, walking distances were significantly reduced and processes were made more efficient. The broader skill set of employees increases flexibility and redundancy within the team. This enhances social sustainability through skill development and workplace safety, while also reducing resource consumption through optimized processes.

The use of an autonomous cleaning robot ensures that all walkways and driveways in the production area are cleaned efficiently and to a consistently high standard. The precise dosing of water and cleaning agents reduces resource consumption and minimizes environmental impact. At the same time, it eases the workload on cleaning staff and lowers costs in the long term.

More natural light, better insulation: roof renovation offers many benefits.

Before returning to the charging station: the new cleaning robot performs its duties with impressive efficiency.

Müller DrumTec's energy consumption over a six-year period

Energy consumption in MWh					
2020	2021	2022	2023	2024	2025
658	698	611	455	421	409

Self-motivated employees

The company's 60th anniversary was celebrated together with employees and their families. The event strengthened the sense of belonging and identification with the company. In this way, a strong corporate culture makes a significant contribution to long-term employee retention, motivation, and social sustainability.

The introduction of a comprehensive leadership framework has helped establish a consistent yet dynamic understanding of leadership across all levels. This promotes transparency, a sense of responsibility, and employee development, and lays the foundation for sustainable corporate governance with a long-term perspective.

The continuous improvements achieved through the 5S audits have led to greater order, safety, and efficiency in production. This reduces waste, prevents errors, and promotes a resource-efficient way of working.

Investing in a modern press has enhanced workplace safety and improved process stability. The use of advanced technology helps reduce the risk of accidents and supports sustainable, future-proof production.

New press for improved workplace safety and process stability

Highlights from Müller DrumTec's 60th-anniversary celebration: a great atmosphere, a fantastic program of events, and a warm, friendly atmosphere
